TLE986x Infineon Embedded Power IC

2-phase motor driver with integrated Arm® Cortex®-M3 MCU

The TLE986x family is part of the Infineon Embedded Power IC portfolio. The TLE986x is a single chip 2-phase motor driver that integrates the industry standard Arm® Cortex®-M3 core, enabling the implementation of advanced motor control algorithms. It includes four fully integrated NFET drivers optimized to drive a 2-phase motor via four external power NFETs, a charge pump enabling low voltage operation and programmable current along with current slope control for optimized EMC behavior. Its peripheral set includes a current sensor, a successive approximation ADC synchronized with the capture and compare unit for PWM control and 16-bit timers. A LIN transceiver is also integrated to enable communication to the device along with a number of general purpose I/Os. It includes an on-chip linear voltage regulator to supply external loads.

The TLE986x family offers scalability in terms of flash memory sizes and MCU system clock frequency supporting a wide range of motor control algorithms. It uses the same MCU and peripherals as the TLE987x family, 3-phase driver, enabling design synergies between DC and BLDC motor control applications.

It is a highly integrated automotive (grade-1 & grade-0) qualified device enabling cost and space efficient solutions for mechatronic DC motor drive applications such as sunroof, power window lifts, exhaust flaps and water valves lift.

Applications

- › Sunroof
- › Power window lift
- › Smart motor control via NFET H-bridge
- › Exhaust flaps
- › Water valves
- › Wiper

Key features

- › Arm® Cortex®-M3 MCU
- › System clock up to 40 MHz
- › Up to 128 KB flash memory
- › 4 K EEPROM emulation
- › NFET drivers with charge pump
- › Current programmable NFET driver with patented slope control for optimized EMC behavior
- › Integrated LIN transceiver compatible with LIN standard 2.2 and SAE J2602
- › Support fast programming via LIN
- › Direct Memory Access (DMA)
- › 10-bit SAR ADC for sensing
- › Timers for PWM signal generation for 2-phase motor control
- › On chip oscillator & PLL
- › Current sense amplifier
- › Grade-1 & grade-0 qualification

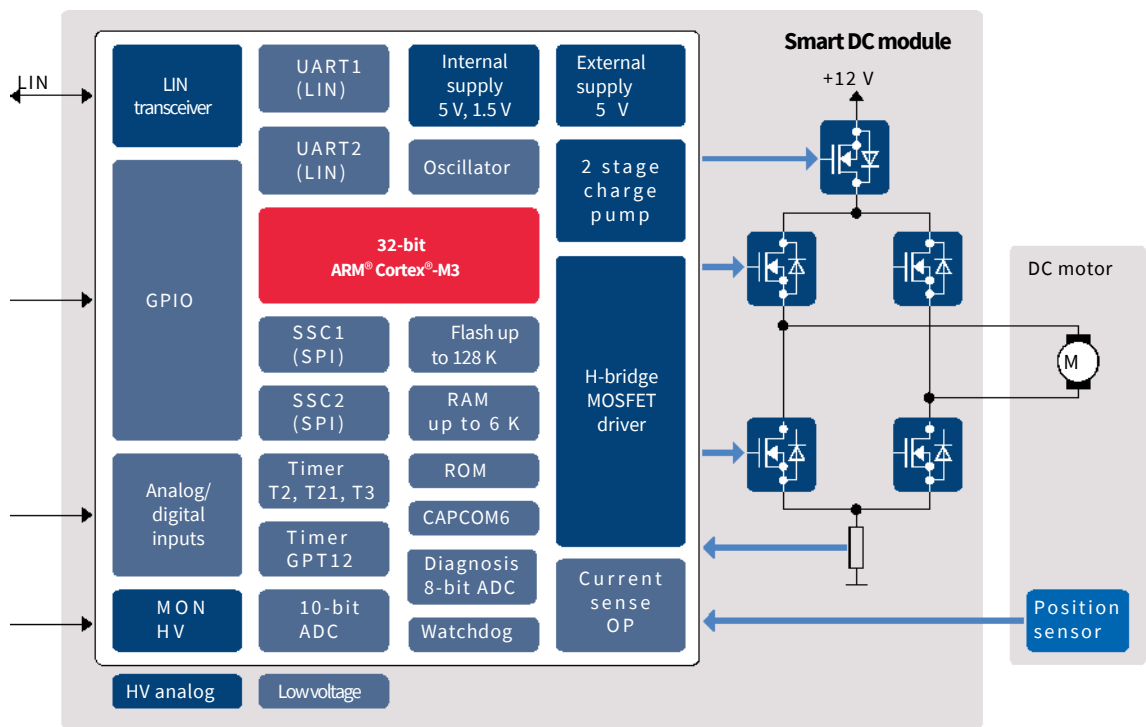

Key benefits

- › Complete system-on-chip for DC motor control
- › Minimum number of external components reduce BOM cost
- › VQFN package with 7 x 7 mm footprint enable PCB space saving
